

# TELESCOPIC REACH POLES

SKU - 400200 /87/88/89/90

## ULTRALIGHT CARBON FIBRE REACH POLES

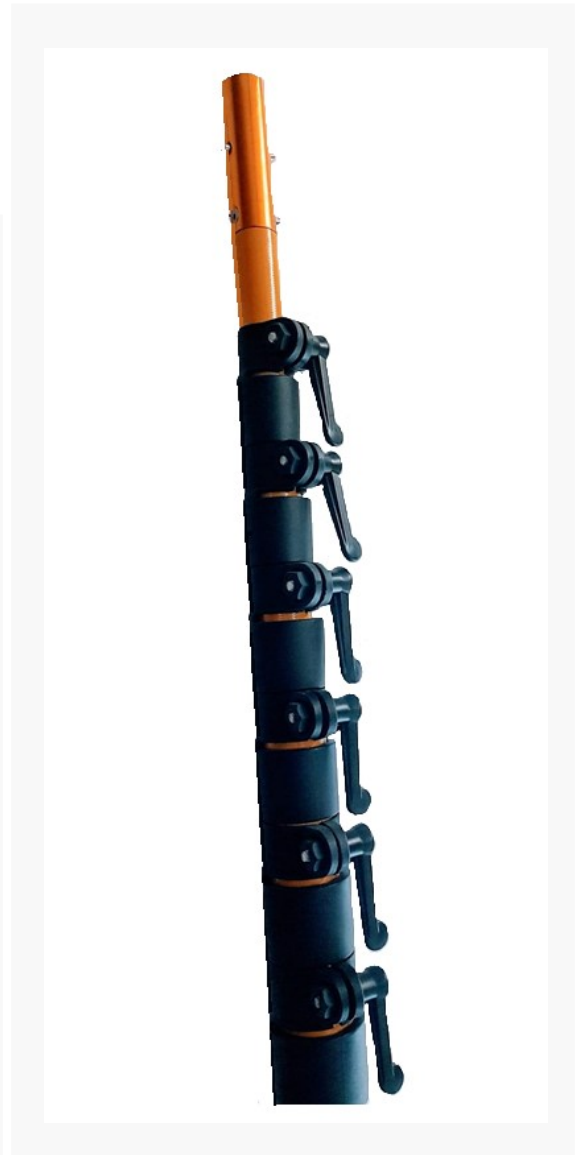

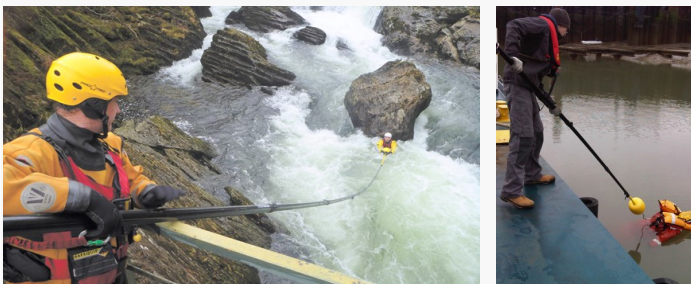

### Description

These ultralight carbon fibre poles have been designed in conjunction with a leading UK Fire & Rescue division, and are ideal for use by the Emergency Services, Military and any organisations involved in water, ice or mud rescues.

At the core of the system is a light weight carbon fibre telescopic pole, with a metal collar to hold a range of rescue attachments which are secured by spring buttons. Each section of the pole is released/secured by a quick clamp.

The poles are available in 5M, 9M, 13M & 17M lengths with a clamping float required to allow the longer lengths to stay on the surface of the water

A wide range of Rescue Attachments are available to suit many different situations, all of which are available at [www.icbrindle.com](http://www.icbrindle.com)
