Radar Reflectors

Small boats typically produce a feeble radar signal, and it is crucial to have an extra radar reflector on board to enhance their detectability to larger vessels. This Radar Reflector comes equipped with plastic head protection that can be effortlessly mounted on the corners and removed when not needed. Moreover, its folding design enables convenient storage when not in use.

KEY FEATURES

- **Enhanced Radar Visibility:** The reflector's multiple metal plates form a geometric shape that generates a strong reflection signal for the radar, making it easier for larger vessels to detect your boat, especially in low-light or foggy conditions.
- **Easy to Install:** these Radar Reflectors are easy to install and fits securely on most types of boats. Featuring a durable plastic head protection that can be easily mounted on the corners and removed when not in use.
- **Convenient and Portable:** The compact size and lightweight design of this reflector make it an ideal choice for small vessels. The foldable design enables easy stowage when not in use.
- **Durable and Reliable:** The Radar Reflector is made of premium-quality materials that ensure durability and reliability even in harsh marine environments. Its robust construction ensures protection against external damage during transportation or storage.
- **Essential Safety Accessory:** This reflector is a must-have safety accessory for all boaters. It helps prevent collisions with larger vessels, keeping you and your passengers safe while out on the water.

Radar Reflectors

SPECIFICATION

- Construction: Multiple metal plates welded together to form a geometric shape
- Mounting: Four attachment points for easy installation on most types of boats
- Plastic Head Protection: Durable and easy to mount on corners, removable when not needed
- Folding Design: Convenient storage when not in use
- Durability: Highly resistant to corrosion and weathering, with robust construction for protection against external damage
- Safety: Enhances radar visibility to prevent collisions with larger vessels, essential safety accessory for boaters in low-light or foggy conditions.

TECHNICAL INFORMATION

- Manufacturing: The reflector is made of multiple metal plates that are welded together to form a geometric shape. The plastic head protection is made of durable and impact-resistant material.
- **Size Configuration:**

Length	Width	Height	Weight	Reflection Ability
21.5 cm	21.5 cm	30 cm	450 gr	3m2
30.5cm	30.5cm	41.5cm	650 gr	5m2
34 cm	34 cm	47 cm	1000 gr	7m2
