Helicopter Salving Hook—4.15m

DESCRIPTION

The Helicopter Rescue Hook is manufactured in two pieces to enable easy stowage and transportation due to its assembled length of 4.15m. Primarily intended for dragging persons from fire situations. Blunted points permit a bite into clothing without tearing the material. The handle is made from non conductive 40mm straight grained Ash and the head is made in a heavy duty steel which is coloured red.

KEY FEATURES

- Ideal for Helicopter Crash Rescue Equipment CAP437
- Comes in two pieces for efficient stowage and transport
- Assembled length of 4.15m, enabling further reach for the operator
- Heavy-duty steel head
- The non-conductive 40mm handle is made from straight grained ash, which is strong, and allows safer operation of hook
- The handle is of a two part construction with a heavy duty screwed brass ferrule for straight-forward assembly
- Designed to help recover and personnel from fire situations
- The end point is blunted — which stops the hook from tearing at material, such as clothing.
- The hook doubles up as a 2-piece equipment set-up
